

ESTR 3102

Gentoo Installation and Kernel Compilation

Helen Chan

SHB 118

hwchan@cse.cuhk.edu.hk

Office Hours: Fri 10am-12pm, or by appointment

Thanks to Dr. Q. Huang and Dr. T.Y. Wong for their slides :)

Outline

- Pre-installation
- Installation
 1. Boot from Gentoo installation CD
 2. Prepare the disk partitions
 3. Prepare the base system
- Kernel Compilation
 1. Get kernel source and configure kernel options
 2. Compile kernel
 3. Set up the new system
- Reference

Outline

- Pre-installation
- Installation
 1. Boot from Gentoo installation CD
 2. Prepare the disk partitions
 3. Prepare the base system
- Kernel Compilation
 1. Get kernel source and configure kernel options
 2. Compile kernel
 3. Set up the new system
- Reference

Pre-installation

- Tools to host a virtual machine (VM)
 - e.g. VirtualBox, VMware Player
- Gentoo installation image (iso)
 - [HK Mirror] <http://goo.gl/bfyQpU>
 - [CSE] <http://goo.gl/w83eT6>
- Enable VT-x for Intel CPU
 - An option available in BIOS (if CPU supports VT-x)
 - Disabled by default (as far as I know ...)
 - Required for running 64-bit VMs

Pre-installation

1. Create a new VM

- For VMware, choose “I will install the operating system later” at the first step
- Size of Hard Disk : no less than 12GB

2. Edit VM setting

- Select the Gentoo CD image for CD-drive

Pre-installation

3. Prepare the resource USB

- Download and place the following files into the top-most directory of your USB
 - Stage tarball: <http://goo.gl/YxTj8P>
 - Portage tarball: <http://goo.gl/FPma4v>
 - Kernel configuration file (VMware):
<http://www.cse.cuhk.edu.hk/~hwchan/estr/config-vmware>
 - Kernel configuration file (VirtualBox):
<http://www.cse.cuhk.edu.hk/~hwchan/estr/config-vbox>
- Around 375 MB in total
 - (File size in Bytes)

```
94293 Sep 16 15:07 config-vbox
99264 Sep 16 15:07 config-vmware
171430444 Sep 16 15:07 portage.tar.bz2
221347440 Sep 16 15:08 stage3.tar.bz2
```

Outline

- Pre-installation
- **Installation**
 1. Boot from Gentoo installation CD
 2. Prepare the disk partitions
 3. Prepare the base system
- Kernel Compilation
 1. Get kernel source and configure kernel options
 2. Compile kernel
 3. Set up the new system
- Reference

Step 1. Boot from Gentoo CD

- Boot VM from CD
 - Press “Enter” when the VM boots up

```
ISOLINUX 4.04 2011-04-18 ETCD Copyright (C) 1994-2011 H. Peter Anvin et al
Gentoo Linux Installation LiveCD http://www.gentoo.org/
Enter to boot; F1 for kernels F2 for options.
Press any key in the next 15 seconds or we'll try to boot from disk._
```

- Press “Enter” to use default keyboard setting

Step 1. Boot from Gentoo CD

- Boot VM from CD
 - After pressing “Enter” twice,

```
Welcome to the Gentoo Linux Minimal Installation CD!
```

```
The root password on this system has been auto-scrambled for security.
```

```
If any ethernet adapters were detected at boot, they should be auto-configured if DHCP is available on your network. Type "net-setup eth0" to specify eth0 IP address settings by hand.
```

```
Check /etc/kernels/kernel-config-* for kernel configuration(s).
```

```
The latest version of the Handbook is always available from the Gentoo web site by typing "links http://www.gentoo.org/doc/en/handbook/handbook.xml".
```

```
To start an ssh server on this system, type "/etc/init.d/sshd start". If you need to log in remotely as root, type "passwd root" to reset root's password to a known value.
```

```
Please report any bugs you find to http://bugs.gentoo.org. Be sure to include detailed information about how to reproduce the bug you are reporting. Thank you for using Gentoo Linux!
```

```
livecd ~ #
```

Step 2. Prepare Disk Partitions

- Show hard disk information

```
livecd ~ # fdisk -l /dev/sda

Disk /dev/sda: 12 GiB, 12884901888 bytes, 25165824 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
livecd ~ # _
```

- Disk partition plan

Partition	File System	Size	Usage
/dev/sda1	(boot loader)	2MB	BIOS boot
/dev/sda2	ext2	128MB	Gentoo boot
/dev/sda3	(swap)	1024MB	Swap partition
/dev/sd4	ext4	All the rest	Root

Step 2. Prepare Disk Partitions

1. Create the partitions (first two partitions)

```
livecd ~ # fdisk /dev/sda
Welcome to fdisk (util-linux 2.25.2).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

Device does not contain a recognized partition table.
Created a new DOS disklabel with disk identifier 0x350651ef.

Command (m for help): n
Partition type
  p   primary (0 primary, 4 free)
  e   extended (contains logical partitions)
Select (default p): p
Partition number (1-4, default 1):
First sector (2048-25165823, default 2048):
Last sector, +sectors or +size{K,M,G,T,P} (2048-25165823, default 25165823): +2M

Created a new partition 1 of type 'Linux' and of size 2 MiB.

Command (m for help): n
Partition type
  p   primary (1 primary, 3 free)
  e   extended (contains logical partitions)
Select (default p): p
Partition number (2-4, default 2):
First sector (6144-25165823, default 6144):
Last sector, +sectors or +size{K,M,G,T,P} (6144-25165823, default 25165823): +128M

Created a new partition 2 of type 'Linux' and of size 128 MiB.
```

fdisk /dev/sda

n

p

(Press "Enter" to use default value,twice)

+2M

+2M

n

p

(Press "Enter" twice)

+128M

+128M

Step 2. Prepare Disk Partitions

1. Create the partitions (last two partitions)

```
Command (m for help) n
Partition type
  p primary (2 primary, 0 extended, 2 free)
  e extended (container for logical partitions)
Select (default p) p
Partition number (3,4, default 3):
First sector (268288-25165823, default 268288):
Last sector, +sectors or +size{K,M,G,T,P} (268288-25165823, default 25165823): +1024M

Created a new partition 3 of type 'Linux' and of size 1 GiB.

Command (m for help): n
Partition type
  p primary (3 primary, 0 extended, 1 free)
  e extended (container for logical partitions)
Select (default e): p
Selected partition 4
First sector (2365440-25165823, default 2365440):
Last sector, +sectors or +size{K,M,G,T,P} (2365440-25165823, default 25165823):

Created a new partition 4 of type 'Linux' and of size 10.9 GiB.

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.
```

Step 2. Prepare Disk Partitions

2. Mark the partitions

```
livecd ~ # fdisk /dev/sda
Welcome to fdisk (util-linux 2.25.2).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

Command (m for help): t
Partition number (1-4, default 4): 1
Hex code (type L to list all codes): ef

Changed type of partition '1' to 'EFI (FAT-12/16/32)'.

Command (m for help): a
Partition number (1-4, default 4): 2

The bootable flag on partition 2 is enabled now.

Command (m for help): t
Partition number (1-4, default 4): 3
Hex code (type L to list all codes): 82

Changed type of partition 'Linux' to 'Linux swap / Solaris'.

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.
```

Step 2. Prepare Disk Partitions

3. Outcome

```
livecd ~ # fdisk -l /dev/sda
```

```
Disk /dev/sda: 12 GiB, 12884901888 bytes, 25165824 sectors
```

```
Units: sectors of 1 * 512 = 512 bytes
```

```
Sector size (logical/physical): 512 bytes / 512 bytes
```

```
I/O size (minimum/optimal): 512 bytes / 512 bytes
```

```
Disklabel type: dos
```

```
Disk identifier: 0x350651ef
```

(it is alright to be different)

Device	Boot	Start	End	Sectors	Size	Id	Type
/dev/sda1		2048	6143	4096	2M	ef	EFI (FAT-12/16/32)
/dev/sda2	*	6144	268287	262144	128M	83	Linux
/dev/sda3		268288	2365439	2097152	1G	82	Linux swap / Solaris
/dev/sda4		2365440	25165823	22800384	10.9G	83	Linux

Step 2. Prepare Disk Partitions

4. Create file systems

- `# mkfs.ext2 /dev/sda2`
- `# mkfs.ext4 /dev/sda4`
- `# mkswap /dev/sda3`

5. Enable swap

- `# swapon /dev/sda3`

6. Mount file systems

- `# mount /dev/sda4 /mnt/gentoo`
- `# mkdir /mnt/gentoo/boot`
- `# mount /dev/sda2 /mnt/gentoo/boot`

Step 3. Prepare the Base System

1. Mount the resource USB

- Connect USB
 - For VMware, at the top right-hand corner

- For VirtualBox, at the bottom right-hand corner

- Make sure the resource usb is the ONLY usb connected to the VM
- **# mkdir /mnt/usb**
- **# mount /dev/sdb1 /mnt/usb**
- **# ls /mnt/usb**

```
localhost ~ # ls /mnt/usb
config-vbox  config-vmware  portage.tar.bz2  stage3.tar.bz2
```

Step 3. Prepare the Base System

2. Extract the stage tarball

- `# cd /mnt/gentoo`
- `# tar xjpf /mnt/usb/stage3.tar.bz2`

3. Mount (special) file systems

- `# mount -t proc proc /mnt/gentoo/proc`
- `# mount --rbind /sys /mnt/gentoo/sys`
- `# mount --rbind /dev /mnt/gentoo/dev`

4. Enter the new environment

- `# chroot /mnt/gentoo /bin/bash`
- `# source /etc/profile`
- `# export PS1="(chroot) $PS1"`

```
(chroot) livecd / #
```

Step 3. Prepare the Base System

5. Mount the resource USB (again)

- `# mkdir /mnt/usb`
- `# mount /dev/sdb1 /mnt/usb`

6. Extract portage tarball

- `# tar xjf /mnt/usb/portage.tar.bz2 -C /usr`

Outline

- Pre-installation
- Installation
 1. Boot from Gentoo installation CD
 2. Prepare the disk partitions
 3. Prepare the base system
- **Kernel Compilation**
 1. Get kernel source and configure kernel options
 2. Compile kernel
 3. Set up the new system
- Reference

Step 1. Get Src. and Config. Kernel

1. Get kernel source code

- `# emerge gentoo-sources`

2. Configure kernel options

- `# cd /usr/src/linux`
- EITHER manually configure the options
 - `# make menuconfig`
 - (press “Enter” to jump to menu, press “Space” to change an option)
 - Configure based on [Reference](#)
- OR copy the configure file
 - For VMware, `# cp /mnt/usb/config-vmware .config`
 - For VirtualBox, `# cp /mnt/usb/config-vbox .config`

Step 2. Compile Kernel

1. Compile and install

- `# make`
- `# make install`
- `# make modules_install`

Step 3. Set up the New System

1. Set up grub bootloader

- `# emerge sys-boot/grub`
- `# grub2-install /dev/sda`
- `# grub2-mkconfig -o /boot/grub/grub.cfg`

2. Set up root password

- `# passwd`

Step 3. Set up the New System

3. Set up /etc/fstab

- # nano /etc/fstab

```
# <fs>          <mountpoint>  <type>         <opts>         <dump/pass>
# NOTE: If your BOOT partition is ReiserFS, add the notail option to opts.
/dev/sda2       /boot         ext2           defaults,noatime 0 2
/dev/sda4       /             ext4           noatime         0 1
/dev/sda3       none         swap          sw              0 0
/dev/cdrom      /mnt/cdrom   auto          noauto,ro       0 0
/dev/fd0        /mnt/floppy  auto          noauto          0 0
```

- Press “Ctrl + x”, “y” and “Enter” to save and exit

Step 3. Set up the New System

4. Set up the network

- `# cd /etc/init.d/`
- For VirtualBox,
 - `# ln -s net.lo net.enp0s3`
 - `# rc-update add net.enp0s3`
- For VMware,
 - `# ln -s net.lo net.eno16777736`
 - `# rc-update add net.eno16777736`
- Reboot !
 - `# reboot`
- Login as “root”

Outline

- Pre-installation
- Installation
 1. Boot from Gentoo installation CD
 2. Prepare the disk partitions
 3. Prepare the base system
- Kernel Compilation
 1. Get kernel source and configure kernel options
 2. Compile kernel
 3. Set up the new system
- Reference

Reference

<https://forums.gentoo.org/viewtopic-t-961502.html>

Appendix

- If you power off the machine just before kernel compilation, do the following steps before resuming the compilation
 - Installation: Enable swap and mount file systems: Step 2.5-2.6
 - Installation: Mount (special) file systems and enter the new environment: Step 3.3-3.4

Appendix

- For VMware,
 - To get more time for entering BIOS or boot menu, add the following option to the end of “.vmx” file **after power off**
 - bios.bootDelay = "5000"
 - This option tells the player to delay for 5 seconds before booting from the default device
 - This will be useful when hard disk is bootable but you want to boot from other devices, e.g. CD, removable drives
